Risk and Safety Reporting

Geotab's fleet safety reports provide advanced insight into your drivers' on-road activities. Risk and safety scores are assigned to individual drivers based on various factors: speeding, seatbelt usage, braking habits, degree of corner turn, acceleration, and after-hours vehicle usage. Also, Geotab reports illustrate daily, weekly, or monthly driving trends to enable managers to develop performance benchmarks.

In-vehicle Coaching in Real-time

Geotab is an early innovator in developing interactive alerts that help drivers identify and improve their on-road driving behavior. All Geotab GO devices come standard with audible buzzer notifications that beep in real-time when drivers deviate from company safety policies.
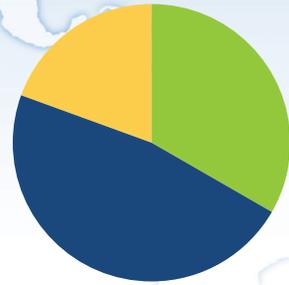

Improve Driver Seatbelt Habits

Geotab's driver and passenger seatbelt detection feature, available for most vehicles, reminds drivers to buckle up while on the road. Greater seatbelt usage results in a reduced potential for driver injuries to occur, and improves compliance with the law and internal fleet safety rules.

Driver Safety Reporting

Reinforce Company Safety Policies

Geotab's Risk Management Report is a customizable feature report used for loss control. It summarizes default data such as speeding, idling, distance and trips, and it can be easily enhanced by adding fleet safety rules such as reversing when leaving, speeding over the limit, driving aggressively and many more.

- Company goal
- Meets Expectations
- Below Expectations

Instant Accident Notifications

With immediate notifications and detailed second-by-second data, Geotab's patented recording algorithm helps you take crucial and timely action steps. The reports let you see the last 30 seconds before the accident occurred. If your vehicle has been hit while parked, Geotab's unique recording technology can help prove no-fault to your insurance provider.

Self-Insured Fleet Benefits

Many mid-to-large sized fleets self-insure their risk for claims in vehicle damage. Loss control departments seek ways to identify 'preventable' claims. Reduce personal injury and the associated claims costs by leveraging Geotab's fleet management solutions to identify risky driving habits and to coach drivers in real-time.
